

Fanpit - Milestone 2

GitHub REPO: <https://github.com/olivernicholass/fanpit>

Logic Process:

(1) Main Page:

- Users can interact with any identifiable buttons that are within the site page. This means the user can click any of these buttons and will be redirected to said page.
- Users can view recent posts, search for posts, and have trending or popular posts filled inside a 3x3 grid of threads they are subscribed to.
- A user can like, comment, and share from the main page on a specific post they are interested in.
- Users can also reach their messages and notifications and view their profile from the homepage.

(2) About Page:

- Users can read information about Fanpit and our company message. Users can return to the homepage by either redirecting via clicking the logo or by selecting the back arrow on their computer.
- Users can also select the “Join the Action” button at the bottom to be sent to the homepage of the website.

(3) Login Page:

- Users can login to their existing account via their username and password.
- Users can select “Remember Me,” so they do not have to constantly enter their details when visiting the website.
- If the user forgets their password, they can select “Forget Password” to reset their password.
- If the user does not have an account registered on the website, they can select the “Register” hyperlink to be redirected to our registration page.

- Users can return to the homepage by either redirecting via clicking the logo or by selecting the back arrow on their computer.

(4) Register Page:

- This page is where the user will create an account if they do not have an existing one.
- A user will enter their name, username, password, email, and birthday.
- All of these text inputs will be validated, and once validated, the user will be able to select "Sign Up," in which case they will be redirected to the homepage and logged in.
- If the user visits this page and already has an existing account, they can also select the "Login" hyperlink to be referred to the login page.
- Users can return to the homepage by either redirecting via clicking the logo or by selecting the back arrow on their computer.

(5) Thread Page:

- This page is where a user will be able to view a specific thread that they have selected.
- Users will be able to leave a comment, like, and share the given post.
- Underneath the post will have comments displayed that contain the date of the comment, the username, and the comment text.
- Users can return to the homepage by either redirecting via clicking the logo or by selecting the back arrow on their computer.

(6) View Profile Page:

- Users will be able to view and edit their profiles on this page.
- Users can see a mix of information that they have created via overview.
- Other sections include viewing their other posts, comments, liked posts, and disliked posts.

- A user can also create a new post from their profile, which will redirect them to the Create Post page.
- The view profile is made as a base for further implementation and includes pages for posts, comments, likes, and dislikes. These pages have the exact same layout as the view profile, only displaying their respected content in the “This user has no activity” section. For example, if the user has a post liked, it will display in that area.

(7) Create Post Page:

- Users will be able to create a post based on the specific sport they are interested in engaging in.
- Users will be able to enter a title for their post.
- Users will be able to embed an image in their post or add a hyperlink.
- Users will be able to enter the post body with their thoughts.
- Users will either respect the rules that are displayed for the specific sport or receive punishment.
- Users can select Post or Back to be redirected to the page they came from.

(8) Messages Page:

- Users will be able to message other users regarding certain topics they are interested in.
- Users can select any buttons that are available on the sidebar to be redirected to a new area they are interested in.
- Users will be able to create a message for a new person by selecting the “Create” icon to search for their username.
- Messages are displayed per person, and the person you are messaging is indicated by the color change.

(9) Notifications Page:

- Users can view their new notifications on this page, old or new.

- Users can click on each individual notification, which will redirect them to the corresponding area.
- Users can access the sidebar and the search bar within this page as well.
- The current state of this page is a rough draft but will most likely include a sorting feature for different types of notifications (i.e., messages or if their post was liked).
- The notification bell will stack based on how many notifications the user currently has, and once viewed, the stack will reset.

(10) Communities:

- The communities page is currently in progress, as there was no specified amount of how many pages we needed to complete for milestone 2. This page will allow users to register for or create a community for a given sport.
